

### Expanded Window Program

At SHAPES Unlimited our Mission is:

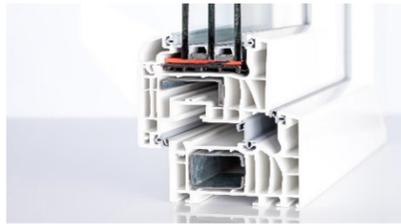

*To consistently challenge the status quo, to develop value-added products and business solutions to meet our customers' evolving needs.*

We are pleased to announce added focus on the window and door industries, aluminum component needs.

From engineering your custom profile dies to sourcing domestically and internationally aluminum extrusion, we can provide our customers with the required quality, just-in-time service, competitive pricing and value-added supply chain solutions.

SHAPES Unlimited is *the* regional market leader in differentiated aluminum products and service solutions to the building products industry. 98% on-time and complete shipments.

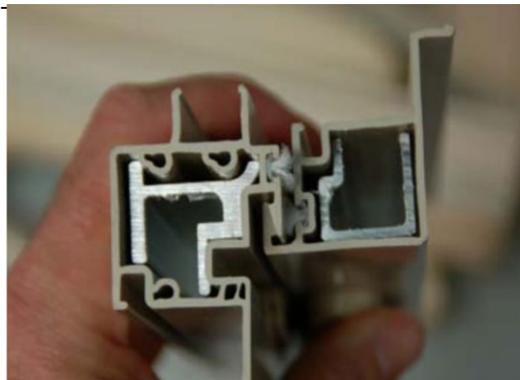

SHAPES Unlimited provides end-to-end logistic solutions. This includes efficient transportation, warehousing, inventory management, and last-mile delivery. With the added expertise of Dalko Resources Inc. for all domestic shipping needs, an immediate improvement in innovative solutions will be implemented, thereby improving cycle times and reduce shipping costs.

### Why Aluminum Components?

Aluminum components play a critical role in fencing, screens and window/door manufacturing due to their resilience and strength. Even the most slender and narrow component is sturdy, ensuring longevity and reliability.

Corrosion resistant properties make aluminum the ideal substrate for indoor and outdoor applications.

Aluminum doesn't warp, rot or deteriorate, making it suitable for various climates. Versatility in shapes, whether square, round, hollow, triangular or any shape, make aluminum the ideal substrate and reinforcement for your building products.

### Powder Coated Aluminum

Durable, weather-resistant finish that lasts up to 15-20 years. Low toxicity and superior protection compared to traditional paint. Applied electrostatically as a dry powder, cured with heat, creating a harder, thicker and tougher coat than traditional paint.

### Powder Coat Advantages

Because there is no liquid carrier, the outcome does not run or sag and produces minimal variances in color from vertical to horizontal. The process is efficient, quick-drying and uniform. Very little VOC's. Being so versatile it provides aesthetic appeal, resistance to corrosion, chipping, fading, scratching and wearing. Powder coating is environmentally friendly and cost-effective.

### Powder Coat Services

ISO 9001:2015 certified – Powder Coating Line product maximum size 30' long x 6' high – Horizontal line application – RoHS-compliant coatings and treatment – Bulk chemical system – Dry-in-place non-chrome sealer pre-treatment – Combination infrared and convection oven for faster cure of powder - Offline racking for processing of small parts – Color verification - 12 GPM reverse osmosis water system for final rinse -12 automatic and 2 hand-spray units – Batch booth for fast processing of customer samples – In-house rack-making capability – Multi-stage pre-treatment – Dry film lubricants
